SUMMARY

Software Engineer | Full Stack Developer
Full Stack Developer with 5 years of experience in web development and e-commerce, including 3+ years of full-stack development. Specialized in the MERN stack (MongoDB, Express.js, React, Node.js) and Next.js, building multi-tenant SaaS platforms, Progressive Web Apps (PWAs), and role-based business systems for HR, finance, and restaurant ordering. Experienced in REST API development, MongoDB and MySQL, and deploying projects end-to-end with Docker and CI/CD pipelines (GitHub Actions) for clients in Egypt and Saudi Arabia.

WORK EXPERIENCE

Full Stack Developer · United Web Development
Jun 2025 – Present

- Own projects end-to-end: requirements, development (frontend, backend, database), deployment, and ongoing maintenance.
- Led the migration, refactoring, and re-architecture of legacy projects, one of the most challenging tasks I have handled: a complex monolithic system with many features and an unstructured codebase, restructured into a cleaner, more maintainable architecture.
- Built a financial management system and investment fund dashboard (Next.js, Node.js, MySQL) with multi-role access and approval workflows.
- Developed a multi-branch e-commerce platform with delivery tracking, live map integration, and a driver PWA.
- Delivered real estate websites with property listing, filtering, and inquiry management.
- Deploy projects using GitHub Actions CI/CD pipelines.

Full Stack Developer · Stream Creations
Jul 2024 – May 2025

- Developed full-stack applications with the MERN stack (MongoDB, Express.js, React, Node.js).
- Built and maintained web and e-commerce platforms using WordPress, PHP, Shopify, and Salla.
- Handled frontend, backend, and deployment for client projects, and supported clients after delivery.

Shopify & Salla Developer · CAF SAP
Oct 2023 – May 2024

- Delivered e-commerce projects for clients across Saudi Arabia using Shopify and Salla.
- Built and customized themes, working with the IT team on client deliverables.

Full Stack Developer Intern · Wxora
Apr 2023 – Jul 2023

- Completed hands-on training in React, Node.js, and MongoDB while working on real-world projects.

E-commerce Manager · Eagle
Feb 2021 – Mar 2023

- Managed the company's online store on Shopify and Odoo, overseeing day-to-day operations end-to-end.
- Worked with internal teams to implement updates, optimize product listings, and resolve technical issues.

WordPress Developer (Part-Time) · Tamken
Jan 2022 – Mar 2022

- Developed and customized WordPress websites and managed plugins.

FEATURED PROJECTS

Gym Management System (SaaS) — Next.js · Node.js · Express.js · MongoDB · Redux · PWA · Electron

- Built a multi-tenant SaaS platform used by gym owners to manage multiple branches from a single dashboard, with PWA apps for trainers and members and an offline-capable Electron desktop app.
- Designed branch-level data isolation with centralized management, and granular role-based permissions (admin, trainer, cashier, receptionist, member).
- Handled long-term data growth and retention through database indexing, query optimization, selective caching, and MongoDB connection pooling.
- Secured the API against abuse and DDoS attacks, and moved WhatsApp notification sending to a separate service to keep core request performance unaffected.
- Running in production for gyms with a large number of members, with positive client feedback.

SaaS Restaurant Menu & Ordering Platform — Next.js · Node.js · Express.js · MongoDB · PWA

- Built a multi-tenant platform where restaurants self-register and manage their digital menu, branding, social links, address, and Google reviews through an admin dashboard.
- Implemented a separate subdomain per restaurant for tenant isolation and faster performance.
- Optimized image handling with server-side resizing for high upload volume, and lazy-loaded menu items to improve page load speed.
- Developed a delivery system with a driver PWA showing order details and customer address, with live tracking of order status and driver location.
- Added meal ratings and role-based permissions for restaurant staff.

Financial System & Investment Fund Dashboard — Next.js · Node.js · Express.js · MySQL

- Refactored a legacy pure-JavaScript system into a structured Next.js/Node.js application, improving code structure and database schema and adding indexes for query performance.
- Built a centralized dashboard to manage investment funds, with extensive role-based permissions and multi-level approval cycles used by a large number of employees.
- Designed the architecture so new features can be added without changing existing core logic.
- Built a public-facing website with two-language i18n (next-intl) and interactive charts using ApexCharts.

Yacht Sales, Brokerage & Rental Platform — Next.js · Node.js · Express.js · MySQL

- Built a full-stack platform for a marine company that is an authorized dealer for international yacht manufacturers, covering new yacht sales, pre-owned listings, and yacht rentals.
- Developed an admin dashboard to manage listings, rentals, and customer enquiries, with an approval cycle.
- Built the public website with yacht catalog browsing, detail pages, and enquiry handling.

Social Media Management Platform — Next.js · Node.js · Express.js · MySQL

- Built an account-management platform that bridges agencies and their clients, with separate dashboards for Manager, Content Creator, and Client.
- Implemented post scheduling in a calendar view, an approval cycle, and a realistic social-media-style post preview, including mobile view.
- Added voice-over support for posts.

HR & Leave Management System — Next.js · Node.js · Express.js · MongoDB · PWA

- Built check-in/out with PWA support and employee records management.
- Implemented leave and remote-day requests based on remaining balance, with a structured HR approval workflow.
- Added Excel report export and email notifications via Nodemailer.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3
Frontend: React.js, Next.js, Redux Toolkit, Tailwind CSS, Progressive Web Apps (PWA), i18n (next-intl)
Backend: Node.js, Express.js, RESTful APIs, Role-Based Access Control (RBAC), Authentication & Authorization
Databases: MongoDB, MySQL, Database Indexing
DevOps & Deployment: GitHub Actions (CI/CD), cPanel
Desktop: Electron
E-commerce & CMS: Shopify, Salla, WooCommerce, WordPress, Odoo
Tools & Practices: Git, OOP, Design Patterns, Data Structures & Algorithms
Familiar With (coursework & self-study): Docker, AWS (EC2, S3), PostgreSQL, Python

EDUCATION

Diploma in Information Technology — Ain Shams Institute — Cairo, Egypt

COURSES & CERTIFICATIONS

- Web Development Bootcamp (Next.js, Express.js, React.js) – Hsoub Academy
- The Complete Node.js Course (RESTful APIs, Express, MongoDB) – Mahara-Tech
- Modern Web Development (React, Node.js, Express.js) – Eng. Yehia Al-Arabi
- Professional Front-End Web Development – Udacity
- Node.js, Algorithms & Data Structures – CloudNativeBaseCamp

LANGUAGES

- Arabic — Native
- English — Good command (Spoken & Written), B2
